YOUR REQUIREMENTS QUALITY IN 10 MIN

3 STEPS TO ASSESS YOUR QUALITY

4.1.2 R2 - /ACCURACY/USEACTIVEVOICE

Use the active voice in the main sentence structure of the need or requirement statement with the responsible entity clearly identified as the subject of the sentence.

Elaboration:

The active voice requires that the entity performing the action is the subject of the sentence. This is important in writing needs and requirements since the onus for satisfying the requirement is on the subject, not the object of the statement. If the entity responsible for the action is not identified explicitly, it is unclear who or what should perform the action making verification of that requirement very difficult. Including the entity in the subject also helps ensure the requirement refers to the appropriate level consistent with the entity name (see R3).

Often when the phrase "shall be" is used, the statement is in the passive voice.

4.1.6 R6 - /ACCURACY/UNITS

Use appropriate units when stating quantities.

Elaboration:

All numbers should have units of measure explicitly stated in terms of the measurement system used or the thing the number refers.

Within a project, a common measurement system must be used consistently. For example, don't mix both US and metric units of measure within any of the project's artifacts.

There are three primary measurement systems: British imperial, US, Metric

For temperatures the following are used: celsius, fahrenheit, or kelvin, etc.
